

STEM'S GREEN VOICE

STEM'S GREEN VOICE

LEARNING WITH THE RIGHT APPROACH

Climate change, renewable energy, and numerous new digital opportunities: understanding events and contexts rooted in science and technology to shape our world today and tomorrow is more crucial than ever. The correct approach is of utmost importance; often, events and contexts are memorized without genuine understanding and application. Therefore, we aim to develop methodological approaches, in collaboration with our school partners, that actively engage young learners in nature education with STEM content. The principle of research-based learning forms the foundation of our work."
